

Market Inefficiency Without Noise — the research stack

One project repo (MIWN) · one reusable hub (Standards) · a background agent fleet you steer from this chat

 auto-merge

 you approve

 low-risk notes

1 Repositories — everything consolidates onto MIWN

ARCHIVED · frozen, read-only history

REZN

theory · proofs · manuscript

MIZN

solver rebuild (strict h = 0)

FIXED-POINT-FACTORY

compute farm → folds into runner

fold in

MIWN

the one canonical project repo

REZN · MIZN · fixed-point-factory all live here now

vendored as
submodule

STANDARDS — reusable hub

owner · direct-to-main · no side branches

writing/

figures ✓ · proofs+refs

methods/

solver · $\|F\| < 1e-20$

runner/

compute · dashboard

agents/ ★

ledger · fleet · autonomy

2 Inside MIWN — the loop the agent fleet runs in the background

YOU

a few prompts / day

DASHBOARD = this chat

reads ledger + open PRs
→ daily digest; asks only on decisions

route

research-ledger.json

one source of truth

typed items:
proof · compute · figure
literature · writing · decision

status · gate · depends_on

agents open PRs → tiered merge

Compute agent

gate $\|F\| < 1e-20$

Figure agent

gate writing/figures ✓

Literature agent

gate writing/references

Proof agent

gate writing/proofs (new)

Writing / QA agent

gate make stale + checklists

Liveness: cron heartbeat (* / 5) + event wake-ups · all state is in the ledger, so any agent that wakes up resumes · stale claims auto-release in 15 min
